Series DS-1 Stainless Steel Dry-Type Sprinklers
5.6K Pendent, HSW, and Extended Coverage HSW
Standard and Quick Response

General Description

TYCO Series DS-1 Stainless Steel Dry-Type Sprinklers, 5.6K Pendent, Horizontal Sidewall (HSW), and Extended Coverage HSW, Standard (5 mm bulb) and Quick (3 mm bulb) Response are the first stainless steel dry-type sprinklers to be listed by UL and C-UL. With a K-factor of 5.6, these corrosion-resistant automatic sprinklers can be used in wet-pipe, dry-pipe, or preaction systems.

These pendent and horizontal sidewall sprinklers are available in a variety of configurations to suit coverage type and thermal sensitivity. Refer to the Sprinkler Identification Numbers (SINs) section for details.

Series DS-1 Stainless Steel Dry-Type Sprinklers are typically used:

- with corrosive atmospheres exist (e.g., salt-water areas, parking garages, chemical storage areas, mechanical rooms, industrial manufacturing sites, and software chip washing facilities)
- on dry-pipe systems exposed to freezing temperatures (e.g., sprinkler drops from unheated portions of buildings)
- with pipe connections exposed to freezing temperatures (e.g., sprinkler drops from wet-pipe systems into freezers or horizontal piping extensions to protect unheated areas)
- in systems that are seasonably drained to avoid freezing (e.g., vacation areas)

The stainless steel construction of these sprinklers extends the life of a sprinkler beyond that of traditional copper alloy sprinklers exposed to corrosive atmospheres. Although corrosion-resistant sprinklers have passed the standard corrosion tests of the applicable approval agencies, the testing is not representative of all possible corrosive atmospheres.

Consequently, it is necessary that the end user be consulted with respect to the suitability of this alternate material of construction for any given corrosive environment. As a minimum, consider the following criteria:

- ambient temperature
- concentration of chemicals
- humidity
- gas/chemical velocity
- corrosive nature of the chemical to which the sprinklers are exposed

Stainless Steel Pendent Dry-Type Sprinklers

The pendent sprinklers are provided with stainless steel escutcheons that allow vertical adjustment during installation. This adjustment provides a measure of flexibility in determining the length of fixed piping to cut for sprinkler drops.

Stainless Steel Sidewall Dry-Type Sprinklers

The horizontal sidewall sprinklers are designed for installation along a wall or side of a soffit and just beneath a smooth ceiling. Sidewall sprinklers are commonly used instead of pendent sprinklers due to aesthetics or building construction considerations where piping along the ceiling is not desirable.

NOTICE

The Series DS-1 Stainless Steel Dry-Type Sprinklers described herein must be installed and maintained in compliance with this document, as well as with the applicable standards of the National Fire Protection Association (NFPA), in addition to the standards of any authorities having jurisdiction. Failure to do so may impair the performance of these devices.

The owner is responsible for maintaining their fire protection system and devices in proper operating condition. Contact the installing contractor or product manufacturer with any questions.

The Series DS-1 Stainless Steel Dry-Type Sprinklers must only be installed in fittings that meet the requirements of the Design Criteria section.

**Notes:**
1. These sprinklers are Listed by UL and C-UL. Stainless steel sprinklers noted to be UL and C-UL Listed are listed as Corrosion Resistant Sprinklers.
2. The minimum allowable spacing between sprinklers to prevent cold soldering is 14 feet (4,3 m).

Technical Data

Approvals
UL and C-UL Listed
LPCB Approved: Ref. No. 094a/12
CE Certified: EN 12259-1
(Refer to Tables A and B for details)

Maximum Working Pressure
175 psi (12.1 bar)

Inlet Thread Connections
1-Inch NPT or ISO 7-R 1

Discharge Coefficient
K=5.6 gpm/psi^(1/2) (80.6 lpm/bar^(1/2))

Temperature Ratings
Refer to Tables A and B

Finishes
Sprinkler: Stainless Steel
Escutcheon: Stainless Steel

Physical Characteristics
With the exceptions of the bulb, the Insert, the Deflector, and the Sealing Assembly, all components of the Series DS-1 Stainless Steel Dry-Type Sprinkler are constructed with Type 316 Stainless Steel.
- The bulb is glass.
- The Insert is 300 Series Stainless Steel.
- The Deflector is Type 316L Stainless Steel.

The Sealing Assembly consists of a Disc Spring that is sealed on both its inside and outside faces with a TEFLOW gasket. The Disc Spring is 1/2 Hard Beryllium Nickel. Refer to Figures 1 through 3 for component assemblies.

Operation

When TYCO Series DS-1 Stainless Steel Dry-Type Sprinklers, 5.6K Pendent, Horizontal Sidewall (HSW), and Extended Coverage HSW, Standard (5 mm bulb) and Quick (3 mm bulb) Response are in service, water is prevented from entering the assembly by the Plug with Sealing Assembly in the Inlet of the sprinkler. Refer to Figures 1 through 3.

The glass bulb contains a fluid that expands when exposed to heat. When the rated temperature is reached, the fluid expands sufficiently to shatter the glass bulb then release the Bulb Seat.

The compressed Spring is then able to expand and push the Water Tube as well as the Guide Tube outward. This outward action simultaneously pulls inward on the Yoke, withdrawing the Plug with Sealing Assembly from the Inlet and allowing the sprinkler to activate and flow water effectively.

Sprinkler Fittings
Install the 1 inch NPT Series DS-1 Stainless Steel Dry-Type Sprinkler in the 1 inch NPT outlet or run of one of the following fittings:
- malleable or ductile iron threaded tee fittings that meet the dimensional requirements of ANSI B16.3 (Class 150)
- cast iron threaded tee fittings that meet the dimensional requirements of ANSI B16.4 (Class 125)
- cast bronze threaded tee fittings that meet the dimensional requirements of ANSI B16.15 (Class 125)
- stainless steel threaded tee fittings that meet the dimensional requirements of MSS SP-114.

Do not install the Series DS-1 Stainless Steel Dry-Type Sprinklers into elbow fittings. The inlet of the sprinkler can contact the interior of the elbow, potentially damaging the Inlet seal.

The unused outlet of the threaded tee is plugged as shown in Figures 4 and 5.

You can also install the Series DS-1 Sprinklers in the 1 Inch NPT outlet of a GRINNELL Figure 730 Mechanical Tee. However, the use of the Figure 730 Tee for this arrangement is limited to wet-pipe systems.

The configuration shown in Figure 4 is only applicable for wet-pipe systems where the sprinkler fitting and water-filled pipe above the sprinkler fitting are not subject to freezing and where the length of the Stainless Steel Dry-Type Sprinkler has the minimum exposure length depicted in Figure 6. Refer to the Exposure Length section.

For wet-pipe system installations of the 1 Inch NPT Series DS-1 Stainless Steel Dry-Type Sprinklers connected to CPVC piping, use only the following TYCO CPVC fittings:
- 1” x 1” NPT Female Adapter (P/N 80145)
- 1” x 1” NPT Sprinkler Head Adapter Tee (P/N 80249)

For dry-pipe system installations, use only the side outlet of maximum 2-1/2 inch reducing tee when locating the Series DS-1 Stainless Steel Dry-Type Sprinklers directly below the branch line. Otherwise, use the configuration shown in Figure 5 to assure complete water drainage from above the Series DS-1 Stainless Steel Dry-Type Sprinklers and the branchline. Failure to do so may result in pipe freezing and water damage.

TY3337 (3 MM BULB) AND TY3357 (5 MM BULB)

**FIGURE 3**
SERIES DS-1 STAINLESS STEEL DRY-TYPE
EXTENDED COVERAGE HORIZONTAL SIDEWALL SPRINKLER
TY3339 (3 MM BULB)
**NOTICE**

Do not install the Series DS-1 Stainless Steel Dry-Type Sprinklers into any other type fitting without first consulting the Technical Services Department. Failure to use the appropriate fitting can result in one of the following:

- failure of the sprinkler to operate properly due to formation of ice over the Inlet Plug or binding of the Inlet Plug
- insufficient engagement of the Inlet pipe threads with consequent leakage

**Drainage**
In accordance with the minimum requirements of the National Fire Protection Association for dry-pipe sprinkler systems, pitch branch, cross, and feed main piping connected to Stainless Steel Dry-Type Sprinklers and subject to freezing temperatures to allow proper drainage.

**Exposure Length**
When using Stainless Steel Dry-Type Sprinklers in wet-pipe sprinkler systems protecting areas subject to freezing temperatures, use Table C to determine a sprinkler’s appropriate exposed barrel length to prevent water from freezing in the connecting pipes due to conduction. The exposed barrel length measurement must be taken from the face of the sprinkler fitting to the surface of the structure or insulation that is exposed to the heated area. Refer to Figure 6 for an example.

**Clearance Space**
Section 8.4.9.2 of 2010 edition of NFPA 13 requires a sealed clearance space around the sprinkler barrel of dry sprinklers that are connected to wet-pipe sprinkler systems protecting insulated freezer structures. The use of the Model DSB-2 Dry Sprinkler Boot, described in technical data sheet TFP591 and illustrated in Figures 7 and 8, meets this NFPA 13 requirement.
**Installation**

TYCO Series DS-1 Stainless Steel Dry-Type Sprinklers, 5.6K Pendent, Horizontal Sidewall (HSW), and Extended Coverage HSW, Standard (5 mm bulb) and Quick (3 mm bulb) Response must be installed in accordance with this section.

**NOTICE**

The Series DS-1 must only be installed in fittings that meet the requirements of the Design Criteria section. For other important requirements regarding piping design and sealing of the clearance space around the Sprinkler Casing, refer to the Design Criteria section.

</tbody>
</table>

Notes:

a. For protected area temperatures that occur between values listed above, use the next cooler temperature.

b. These lengths are inclusive of wind velocities up to 30 mph (18.6 kph).

---

**Step 1.** Install pendent sprinklers only in the pendent position with the deflector parallel to the ceiling. Install horizontal sidewall sprinklers in the horizontal position with their center-line of waterway perpendicular to the back wall and parallel to the ceiling. Ensure the word “TOP” on the Deflector faces the ceiling.

**Step 2.** With a non-hardening pipe thread sealant such as TEFLO applied to the Inlet threads, hand-tighten the sprinkler into the sprinkler fitting.

**Step 3.** Wrench-tighten the sprinkler using a pipe wrench on the Inlet Band or Casing (refer to Figures 1 to 3) or using the W-Type 7 Sprinkler Wrench on the Wrench Flat (refer to Figure 9).

**Note:** If sprinkler removal becomes necessary, remove the sprinkler using the same wrenching method noted above. Sprinkler removal is easier when a non-hardening sealant was used and torque guidelines were followed. After removal, inspect the sprinkler for damage.

**Step 4.** After installing the ceiling or wall and applying a ceiling finish, slide on the outer piece of the Escutcheon until it comes in contact with the ceiling or wall. Do not lift the ceiling panel out of its normal position.

When using the Deep Escutcheon, hold the outer piece in contact with the mounting surface (ceiling or wall). Then rotate the inner piece approximately 1/4 turn, with respect to the outer piece, to hold the Deep Escutcheon firmly together.

</tr>
</tbody>
</table>

**Notes:**

a. For protected area temperatures that occur between values listed above, use the next cooler temperature.

b. These lengths are inclusive of wind velocities up to 30 mph (18.6 kph).

Do not install any bulb type sprinkler if the bulb is cracked or there is a loss of liquid from the bulb. With the sprinkler held horizontally, a small air bubble should be present. The diameter of the air bubble is approximately 1/16 inch (1.6 mm) for the 135°F (57°C) rating to 1/8 inch (3.2 mm) for the 286°F (141°C) rating.

A leak-tight 1 inch NPT sprinkler joint should be obtained by applying a minimum-to-maximum torque of 20 to 30 ft.-lbs. (26.8 to 40.2 Nm). Higher levels of torque can distort the sprinkler Inlet with consequent leakage or impairment of the sprinkler.

Do not attempt to compensate for insufficient adjustment in an Escutcheon Plate by under- or over-tightening the Sprinkler. Re-adjust the position of the sprinkler fitting to suit.

FIGURE 13
PENDENT WITHOUT ESCUTCHEON
TY3230 (3 MM BULB) AND TY3250 (5 MM BULB)
Care must be exercised to avoid damage to the sprinklers - before, during, and after installation. Sprinklers damaged by dropping, striking, wrench twist/slippage, or the like, must be replaced. Also, replace any sprinkler that has a cracked bulb or that has lost liquid from its bulb. (Refer to Installation Section.)

The owner is responsible for the inspection, testing, and maintenance of their fire protection system and devices in compliance with this document, as well as with the applicable standards of the National Fire Protection Association (e.g., NFPA 25), in addition to the standards of any other authorities having jurisdiction. Contact the installing contractor or product manufacturer with any questions.

Automatic sprinkler systems are recommended to be inspected, tested, and maintained by a qualified Inspection Service in accordance with local requirements and/or national codes. 

**Care and Maintenance**

TYCO Series DS-1 Stainless Steel Dry-Type Sprinklers, 5.6K Pendent, Horizontal Sidewall (HSW), and Extended Coverage HSW, Standard (5 mm bulb) and Quick (3 mm bulb) Response must be maintained and serviced in accordance with this section.

Before closing a fire protection system main control valve for maintenance work on the fire protection system that it controls, obtain permission to shut down the affected fire protection systems from the proper authorities and notify all personnel who may be affected by this action.

Absence of the outer piece of an escutcheon, which is used to cover a clearance hole, can delay sprinkler operation in a fire situation.

A Vent Hole is provided in the Bulb Seat to indicate if the Dry Sprinkler is remaining dry. (Refer to Figures 1 through 3.) Evidence of leakage from the Vent Hole indicates potential leakage past the Inlet seal and the need to remove the sprinkler to determine the cause of leakage; for example, an improper installation or an ice plug. Close the fire protection system control valve and drain the system before removing the sprinkler.

Sprinklers which are found to be leaking or exhibiting visible signs of corrosion must be replaced.

Sprinklers that have been exposed to corrosive products of combustion, but have not operated, should be replaced if they cannot be completely cleaned by wiping the sprinkler with a cloth or by brushing it with a soft bristle brush. Care must be exercised to avoid damage to the sprinklers - before, during, and after installation. Sprinklers damaged by dropping, striking, wrench twist/slippage, or the like, must be replaced. Also, replace any sprinkler that has a cracked bulb or that has lost liquid from its bulb. (Refer to Installation Section.)

The owner is responsible for the inspection, testing, and maintenance of their fire protection system and devices in compliance with this document, as well as with the applicable standards of the National Fire Protection Association (e.g., NFPA 25), in addition to the standards of any other authorities having jurisdiction. Contact the installing contractor or product manufacturer with any questions.

Automatic sprinkler systems are recommended to be inspected, tested, and maintained by a qualified Inspection Service in accordance with local requirements and/or national codes.
Limited Warranty

For warranty terms and conditions, visit www.tyco-fire.com.

Ordering Procedure

Contact your local distributor for availability. When placing an order, indicate the full product description and Part Number (P/N).

Refer to the price list for a complete listing of part numbers. Part numbers are for 1 inch NPT standard order sprinklers. Orders for all other sprinkler assemblies must be accompanied by a complete description.

Stainless Steel Dry-Type Sprinkler

When ordering Series DS-1 Stainless Steel Dry-Type Sprinklers, 5.6K Pendent, Horizontal Sidewall (HSW), and Extended Coverage HSW, Standard (5 mm bulb) and Quick (3 mm bulb) Response, specify the following information:

- SIN
  - Standard Coverage Pendent
    - TY3230 – Quick Response
    - TY3250 – Standard Response
  - Standard Coverage Horizontal Sidewall
    - TY3337 – Quick Response
    - TY3357 – Standard Response
  - Extended Coverage Horizontal Sidewall
    - TY3339 – Quick Response

- Order Length:
  - Dry-Type Sprinklers are furnished based upon Order Length as measured per Figures 10 through 17, as applicable. Measure the required length and then round the measurement to the nearest 1/4 inch increment.

- Inlet Connections:
  - 1 Inch NPT (Standard)
  - ISO 7-R 1
    (For information on ISO Inlet Thread Connections, contact your Tyco Sales Representative.)

- Temperature Rating
  (Temperature rating 360°F (182°C) applies to non-recessed sprinkler assemblies.)

- Escutcheon Type, as applicable

- Part Number from Table D

Sprinkler Wrench
Specify W-Type 7 Sprinkler Wrench
P/N 56-850-4-001

Sprinkler Boot
Specify Model DSB-2 Dry Sprinkler Boot
P/N 63-000-0-002

This P/N includes one (1) Boot, two (2) Strap Ties, and 1/3 oz. of Adhesive (a sufficient quantity for installing one boot).

### Notes:
1. Dry-Type Sprinklers are furnished based upon “Order Length” as measured per Figures 10 through 17 and for each individual sprinkler where it is to be installed. After taking the measurement, round it to the nearest 1/4 inch increment.
2. Temperature rating 360°F (182°C) applies to non-recessed sprinkler assemblies.

* Use Prefix “I” for ISO 7-R 1 Connection (e.g., I-60-110-6-055).
